

Tronrud Mod. TE Titan Gen 2 Std. M18x1 .30 .308Win

Kaliber: .308Win

TRONRUD | TE-TITAN GEN 2.0 Standard .308

TE-Titan Gen 2.0 suppressors meets most requirements for hunting and sports shooters. The internal structure is optimized for every caliber, resulting in low weight and excellent performance. The suppressors are extremely reliable because of the chosen material Titanium Grade 5. The thread insert is made from stainless steel. All suppressors are rated for magnum calibers. TE-Titan Standard is the absolute favorite when maximum performance and recoil absorption are required. It is the biggest suppressor in the Gen 2.0 series. Baffles and internal structure are optimized for magnum calibers.

Titanium is one of the most corrosion resistant metals. Titanium is not damaged by water, saline solution or chlorine gas. Tests show that carbon build up does not adhere to titanium in the same way it does on aluminum and steel. After 8000 rounds with caliber 308, there is still no need for cleaning the suppressor

Material Titanium Grade 5.
Weight 340 g
Reduction -33 DB (C)
Total length 220 mm
Length 140 mm
Max. dia 25 mm
